

# Cyclistic Bike Study

Thuan

2023-12-18

## Introduction

Over the past months, I have been taking the Google Data Analytics courses on Coursera. Throughout the course there was a heavy emphasis on the analysis process: Ask, Prepare, Process, Analyze, Share and Act. A case study is a great way to showcase what I have learned and understanding from the course. Given a scenario and the data, with the analysis process in mind, below are my approach toward the case study, I'll be using R and Tableau for this report.

## Scenario

In 2016, Cyclistic launched a successful bike-share offering. Since then, the program has grown to a fleet of 5,824 bicycles that are geotracked and locked into a network of 692 stations across Chicago. The bikes can be unlocked from one station and returned to any other station in the system anytime.

You are a junior data analyst working in the marketing analyst team at Cyclistic, a bike-share company in Chicago. The director of marketing believes the company's future success depends on maximizing the number of annual memberships. Therefore, your team wants to understand how casual riders and annual members use Cyclistic bikes differently. From these insights, your team will design a new marketing strategy to convert casual riders into annual members. But first, Cyclistic executives must approve your recommendations, so they must be backed up with compelling data insights and professional data visualizations.

Cyclistic's marketing strategy relied on building general awareness and appealing to broad consumer segments. One approach that helped make these things possible was the flexibility of its pricing plans: single-ride passes, full-day passes, and annual memberships. Customers who purchase single-ride or full-day passes are referred to as casual riders. Customers who purchase annual memberships are Cyclistic members.

Cyclistic's finance analysts have concluded that annual members are much more profitable than casual riders. Although the pricing flexibility helps Cyclistic attract more customers, Moreno believes that maximizing the number of annual members will be key to future growth. Rather than creating a marketing campaign that targets all-new customers, Moreno believes there is a very good chance to convert casual riders into members. She notes that casual riders are already aware of the Cyclistic program and have chosen Cyclistic for their mobility needs.

## Business task

Lily Moreno is the director of marketing and your manager. Moreno is responsible for the development of campaigns and initiatives to promote the bike-share program. These may include email, social media, and other channels.

Moreno has set a clear goal: Design marketing strategies aimed at converting casual riders into annual members. In order to do that, however, the marketing analyst team needs to better understand how annual members and casual riders differ, why casual riders would buy a membership, and how digital media could affect their marketing tactics. Moreno and her team are interested in analyzing the Cyclistic historical bike trip data to identify trends.

Moreno has establish three questions that will guide the future marketing programs: 1. How do annual members and casual riders use Cyclistic bikes differently? 2. Why would casual riders buy Cyclistic annual memberships? 3. How can Cyclistic use digital media to influence casual riders to become members?

## Prepare

We are given historical trip data from the company to analyze and identify trends. The data provide are from 2003 to 2023. (Note: The datasets have a different name because Cyclistic is a fictional company. For the purposes of this case study, the datasets are appropriate and will enable you to answer the business questions. The data has been made available by Motivate International Inc. under this license.)

## Process

I'll be using R programming to load the data as spreadsheet cannot process the large amount of data that are being use. I'll be using data from the year 2022.

## Installing package

Below are package that I'll be using to process the data.

```
library(tidyverse)
library(janitor)
library(lubridate)
```

Results

```
## -- Attaching core tidyverse packages ----- tidyverse 2.0.0 --
## v dplyr      1.1.2      v readr      2.1.4
## v forcats    1.0.0      v stringr   1.5.0
## v ggplot2    3.4.3      v tibble    3.2.1
## v lubridate  1.9.2      v tidyr     1.3.0
## v purrr      1.0.2
## -- Conflicts ----- tidyverse_conflicts() --
## x dplyr::filter() masks stats::filter()
## x dplyr::lag()     masks stats::lag()
## i Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to become errors
##
## Attaching package: 'janitor'
##
##
## The following objects are masked from 'package:stats':
##
##   chisq.test, fisher.test
```

## Importing data

After downloading the data provide, I'll be using read.csv to import the data into R.

```
Jan2022 <- read.csv("202201-divvy-tripdata.csv")
Feb2022 <- read.csv("202202-divvy-tripdata.csv")
Mar2022 <- read.csv("202203-divvy-tripdata.csv")
Apr2022 <- read.csv("202204-divvy-tripdata.csv")
May2022 <- read.csv("202205-divvy-tripdata.csv")
Jun2022 <- read.csv("202206-divvy-tripdata.csv")
Jul2022 <- read.csv("202207-divvy-tripdata.csv")
Aug2022 <- read.csv("202208-divvy-tripdata.csv")
```

```
Sep2022 <- read.csv("202209-divvy-tripdata.csv")
Oct2022 <- read.csv("202210-divvy-tripdata.csv")
Nov2022 <- read.csv("202211-divvy-tripdata.csv")
Dec2022 <- read.csv("202212-divvy-tripdata.csv")
```

## Looking over data

The step below give me a quick view of the data and the whether the formatting for the columns are consistent.

```
# The str() function provide the structure of the data which provide a quick
# summary of the data and it format
str(Jan2022)
str(Feb2022)
str(Mar2022)
str(Apr2022)
str(May2022)
str(Jun2022)
str(Jul2022)
str(Aug2022)
str(Sep2022)
str(Oct2022)
str(Nov2022)
str(Dec2022)
```

### Results

```

## Merging data

In this step, I'm merging the data to create a new data set and remove any empty columns and rows.

```
merge_df <- bind_rows(Jan2022, Feb2022, Mar2022, Apr2022, May2022, Jun2022,
                      Jul2022, Aug2022, Sep2022, Oct2022, Nov2022, Dec2022)

merge_df <- clean_names(merge_df)
remove_empty(merge_df, which = c())
```

Results

```
##           ride_id rideable_type      started_at      ended_at

```

From earlier using the `str()` functions that display the summary of the columns, we can see that the columns `started_at` and `ended_at` are format as `char` instead of date time format. Below, I'll convert `char` into date time.

```
#as.POSIXct function let me convert date, time and time zones instead of as.Date() which only deals with
merge_df$started_at <- as.POSIXct(merge_df$started_at, format = "%Y-%m-%d %H:%M:%S", tz = "GMT")
merge_df$ended_at <- as.POSIXct(merge_df$ended_at, format = "%Y-%m-%d %H:%M:%S", tz = "GMT")

str(merge_df)
```

Results

```
## 'data.frame':    5667717 obs. of  13 variables:

## $ member_casual    : chr  "casual" "casual" "member" "casual" ...
```

## Insight

After a brief view of the data, with our current information, we would only be able to aggregate at ride-level, AKA popular stations, types of bikes used, percentages of casual members to annual members, etc.

Below, I'll be adding new columns that could help me answer the business task, such as the day of week that customers rent bike, the month in order to see which month is most popular, and the trip duration of each rental.

```
merge_df$day_of_week <- wday(merge_df$started_at, label = T, abbr = T)

merge_df$month <- month(merge_df$started_at)
```

```
merge_df$trip_duration <- difftime(merge_df$ended_at, merge_df$started_at, units = 'sec')
merge_df$starting_hour <- format(as.POSIXct(merge_df$started_at), '%H')
str(merge_df)
```

Results

```
## 'data.frame': 5667717 obs. of 17 variables:
## $ ride_id : chr "C2F7DD78E82EC875" "A6CF8980A652D272" "BD0F91DFF741C66D" "CBB80ED4191054" ...
## $ rideable_type : chr "electric_bike" "electric_bike" "classic_bike" "classic_bike" ...
## $ started_at : POSIXct, format: "2022-01-13 11:59:47" "2022-01-10 08:41:56" ...
## $ ended_at : POSIXct, format: "2022-01-13 12:02:44" "2022-01-10 08:46:17" ...
## $ start_station_name: chr "Glenwood Ave & Touhy Ave" "Glenwood Ave & Touhy Ave" "Sheffield Ave & Fullerton" ...
## $ start_station_id : chr "525" "525" "TA1306000016" "KA1504000151" ...
## $ end_station_name : chr "Clark St & Touhy Ave" "Clark St & Touhy Ave" "Greenview Ave & Fullerton" ...
## $ end_station_id : chr "RP-007" "RP-007" "TA1307000001" "TA1309000021" ...
## $ start_lat : num 42 42 41.9 42 41.9 ...
## $ start_lng : num -87.7 -87.7 -87.7 -87.7 -87.6 ...
## $ end_lat : num 42 42 41.9 42 41.9 ...
## $ end_lng : num -87.7 -87.7 -87.7 -87.7 -87.6 ...
## $ member_casual : chr "casual" "casual" "member" "casual" ...
## $ day_of_week : Ord.factor w/ 7 levels "Sun"<"Mon"<"Tue"<...: 5 2 3 3 5 3 1 7 2 6 ...
## $ month : num 1 1 1 1 1 1 1 1 1 1 ...
## $ trip_duration : 'difftime' num 177 261 261 896 ...
## ..- attr(*, "units")= chr "secs"
## $ starting_hour : chr "11" "08" "04" "00" ...
```

After, adding the new columns, I'll clean the data one more by creating a new dataframe that would remove any trip duration that are below 0.

```
clean_df <- merge_df[!(merge_df$trip_duration <= 0),]
```

## Analyze

During this analyze step, I would like to remind myself of the business task that need to solve. Which are:

1. How do annual members and casual riders use Cyclistic bikes differently?
2. Why would casual riders buy Cyclistic annual memberships?
3. How can Cyclistic use digital media to influence casual riders to become members?

Furthermore, I would like to add on to this by looking at the hours of bike use between the casual and members, which time of the years where the bike rental peak, and between casual and member who spent more time using the bike over the years.

In order to answer these questions, I'll be using graph and plot to better observe the tasks that are being ask.

### Plot 1: Number of rides by member type

```
#remove scientific notation
options(scipen = 999)

ggplot(data = clean_df) + aes(x = day_of_week, fill = member_casual) +
  geom_bar(position = 'dodge') +
```

```
labs(x = 'Day of week', y = 'Number of rides', fill = 'Member Type',
     title = 'Number of rides by member type')
```

Plot 2: Number of rides per month

```
ggplot(data = clean_df) + aes(x = month, fill = member_casual) +
  geom_bar(position = 'dodge') +
  labs(x = 'Month', y = 'Number of rides', fill = 'Member type',
       title = 'Number of rides per month')
```

Plot 3: Bikes usage throughout the week

```
ggplot(data = clean_df) + aes(x = starting_hour, fill = member_casual) +
  facet_wrap(~day_of_week) +
  geom_bar() +
  labs(x = 'Starting hour', y = 'Number of rides', fill = 'Member Type',
       title = 'Bikes use throughout the week by hour') +
  theme(axis.text = element_text(size = 5))
```

## Bikes use throughout the week by hour

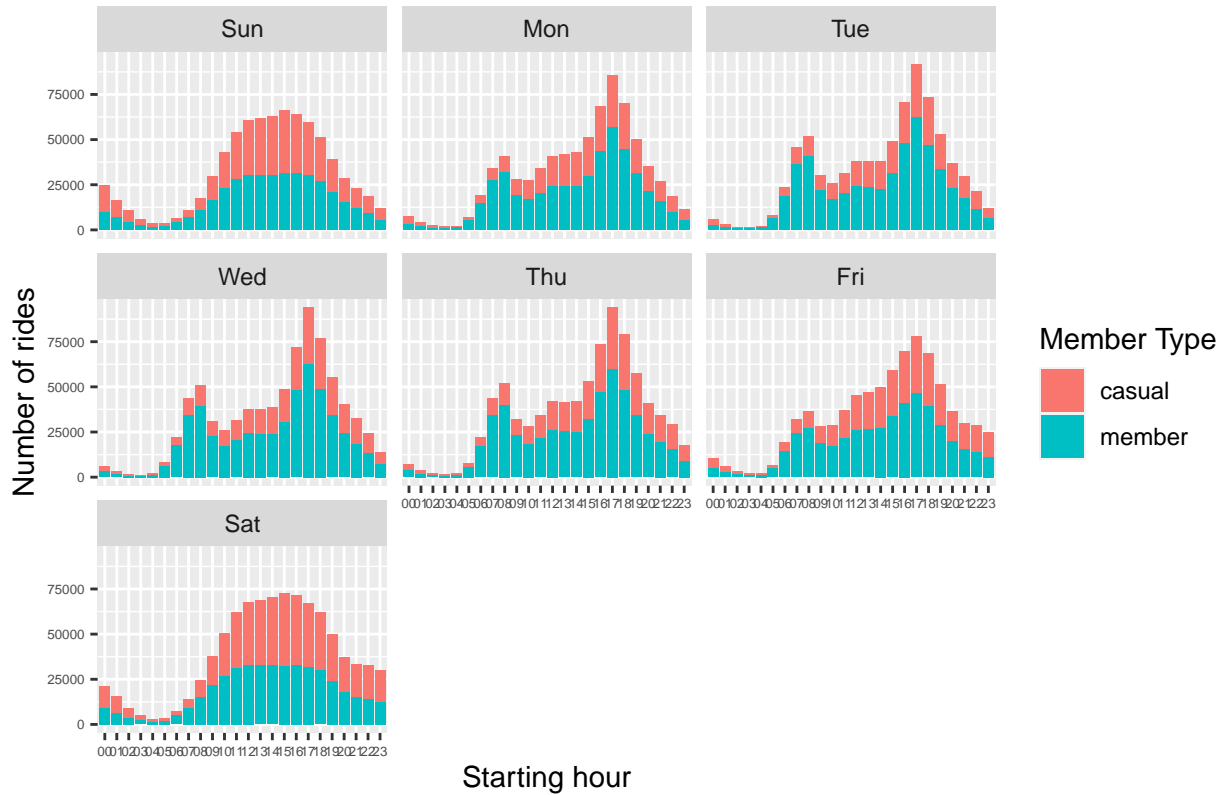

Table 1: Average trip duration of member types by day of weeks

```
aggregate(clean_df$trip_duration ~ clean_df$member_casual + clean_df$day_of_week, FUN = mean)
```

	clean_df\$member_casual	clean_df\$day_of_week	clean_df\$trip_duration
## 1	casual	Sun	2043.6343 secs
## 2	member	Sun	841.9355 secs
## 3	casual	Mon	1751.3805 secs
## 4	member	Mon	736.2531 secs
## 5	casual	Tue	1549.5189 secs
## 6	member	Tue	727.8171 secs
## 7	casual	Wed	1485.1319 secs
## 8	member	Wed	726.3364 secs
## 9	casual	Thu	1533.0238 secs
## 10	member	Thu	737.6191 secs
## 11	casual	Fri	1682.8110 secs
## 12	member	Fri	751.8978 secs
## 13	casual	Sat	1957.0725 secs
## 14	member	Sat	848.4573 secs

Plot 4: Average trip duration of member type

```
ggplot(data = clean_df) +
  aes(x = member_casual, y = trip_duration, color = member_casual,
      fill = member_casual) +
```

```
geom_bar(stat = 'summary')
```

```
## Don't know how to automatically pick scale for object of type <difftime>.  
## Defaulting to continuous.  
## No summary function supplied, defaulting to 'mean_se()'
```

### Most frequent stations by member type

*#count will let you count, group & sort the unique values from a dataframe*

```
annual_member_df <- filter(clean_df, member_casual=='member')  
count(annual_member_df, start_station_name, sort = T)  
count(annual_member_df, end_station_name, sort = T)
```

## Observation from the data

Below are hypothesis that I have gather after analyzing the plots and graph throughout the whole process of the analysis:

First, there's a high chance that the casual members are composed of tourists and/or families member who use the rental service as a mean to sightseeing and other leisure activities as the usage of casual members are mostly on weekends. Also, some of the popular station that casual members frequent are mostly attractions location.

Second, there are a high usage of annual members in the weekdays compare to casual members, this infor-

mation give us an idea that there a high possibility that the annual member are composed of working adults who are using the service as a mean of transportation for work. From Tableau, some of the most frequent station for the annual members doesn't compose of any location near any attraction.

Last and not least, there's a possibility that the service could be exploit from the single-ride pass, we are given information from the scenario that there are three price plan of single-ride, full-day, and annual, furthermore, the bike can be returned anytime. This could created a problem where customers could exploit it by just buying a single-ride passes.

## Recommendation

Below are a few suggestion that could provide solution for the business tasks:

In order to convert casual to annual, there should be an incentive to convert for the customers. What I suggest would be a mileage reward for annual members base on the how much there mileage are for the week, month, or year.

There should be prioritize advertisement on the weekends and from the months of June through August. Since there are peak casual riders on the weekend and June through August. Also, I would suggest occasional offer discount to switch to an annual members. Another, suggestion is using location-based advertising to target the popular stations among the casual members.

## Constraint

There are a few constraint from the data that limit the analysis, such as casual riders are a combination of single-ride and full-day passes. If this information are given we could further pinpoint whether the customers are exploiting the single-ride passes. Also, having a unique IDs would give more information of individual who has used the service the most, which allows for a more specific promotion such as the milestone reward that are mention.
